1 Introduction

The IOS app (iPhone and iPad) **SailTokyo-Tracker** is part of the cloud based team solution **SailTokyo**. Without connection to the core solution **SailTokyo** the app runs with limited functionality.

Main features of **SailTokyo-Tracker** are:

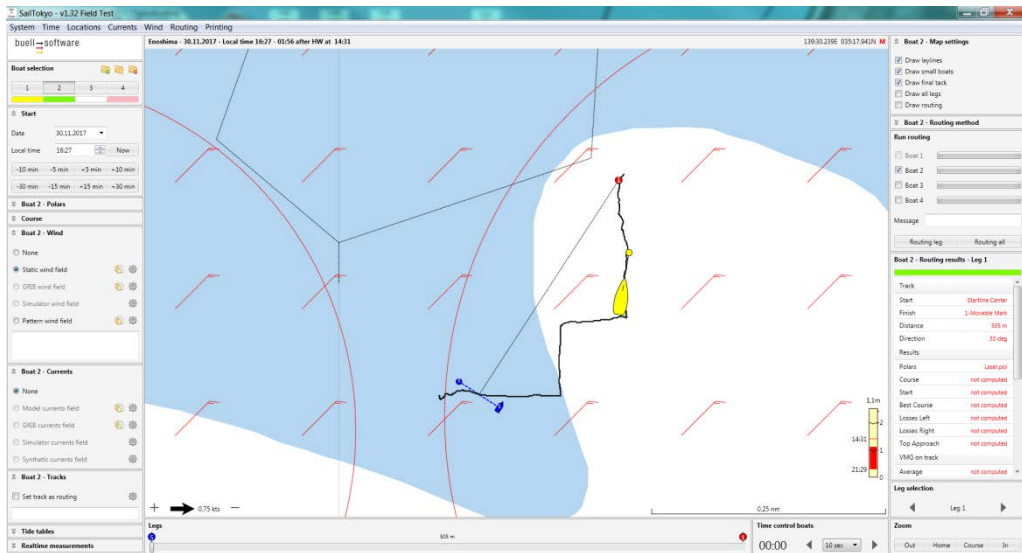

- GPS based tracking of courses while sailing
- Display of tracks on various maps
- Data storage on mobile device
- Data sync to SailTokyo software

SailTokyo-Tracker is an easy-to-use and efficient app. The image below shows an example of a track:

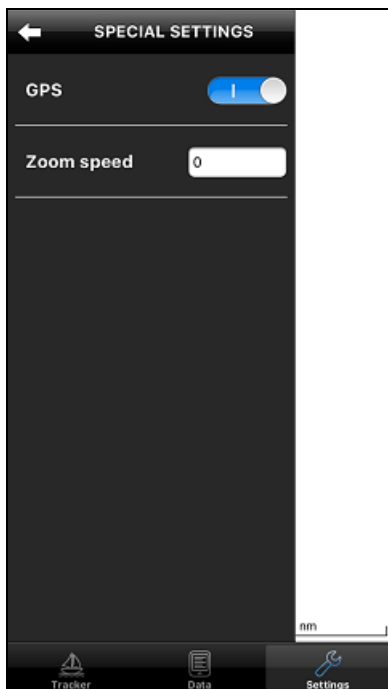

If **SailTokyo-Tracker** is connected to **SailTokyo** via cloud further options are:

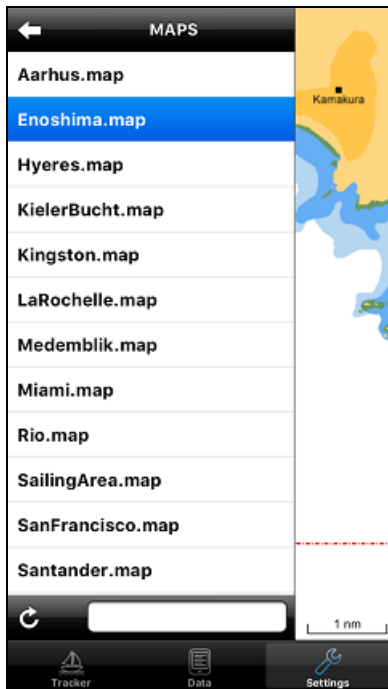

- Sharing of data with all participants of the team cloud
- More maps
- Settings for locations with no available map (Open waters)
- Track analysis on **SailTokyo** desktop solution

2 Recording of tracks

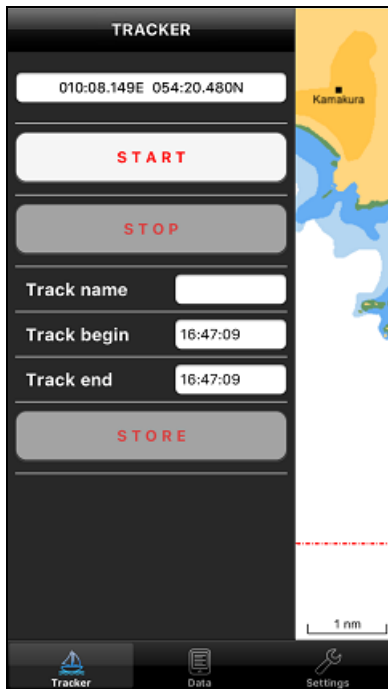

- Click **Settings – Special Settings**
- Switch on **GPS** (Default=on)

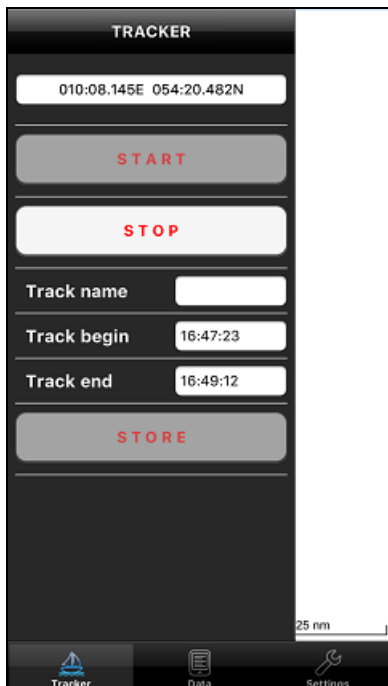

- Click **Settings – Maps** to select the map of your sailing area

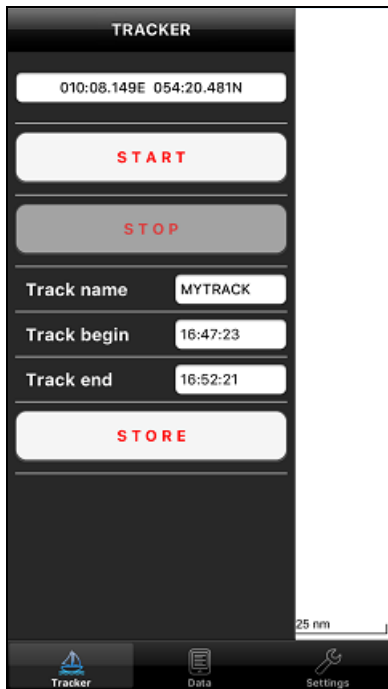

- If you are connected to team cloud you can select **open waters** for venues without available map.
- Click **Settings - Open waters**
- **Sync** open waters created with **SailTokyo** desktop solution (**Circled button** at bottom left)
- Select venue

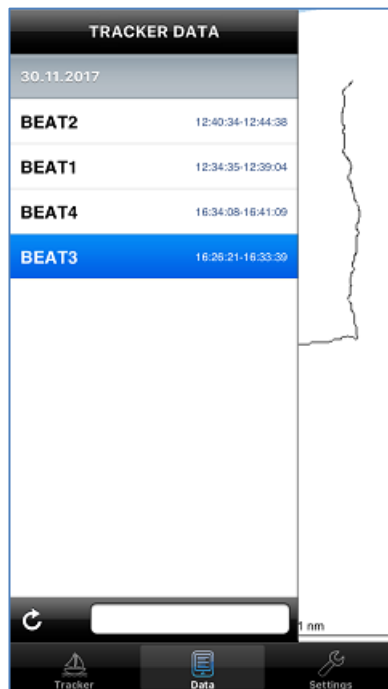

- To start tracking select **Tracker** at bottom toolbar
- The tracker is ready to start recording
- The control at top displays GSP position continuously
- Press **START** to begin recording your track

- The tracker now records position and time whenever GPS position changes
- Press **STOP** to end tracking
- Enter **Track name** (Up to 10 chars)
- Alter the time in **Track begin** if you want to cut off data before start of race
- Alter the time in **Track end** if you want to cut off data after end of race

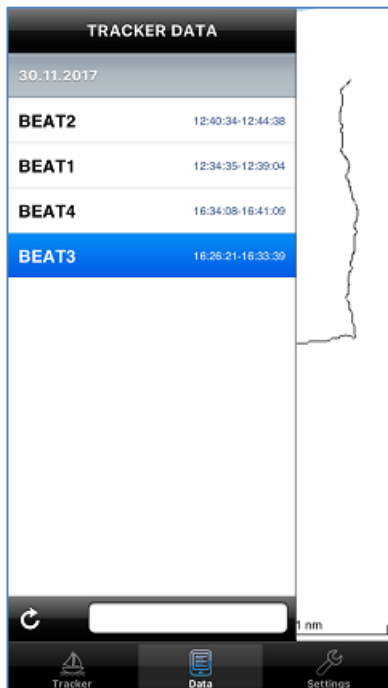

- Now the track is ready to **STORE** on the mobile device
- Another option is to press **START** again without saving previous track

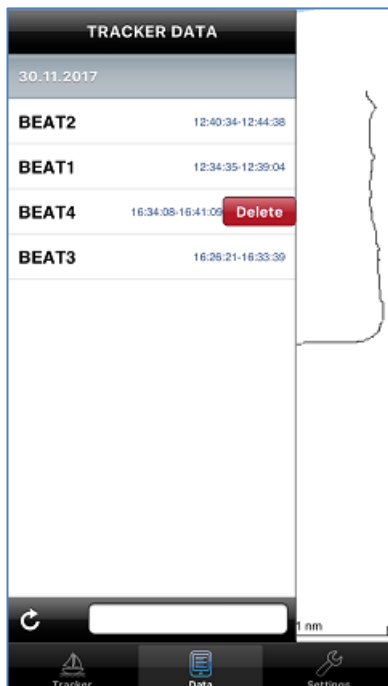

- Press **Data** in toolbar at the bottom to display all recorded data of the current location

3 Display tracks

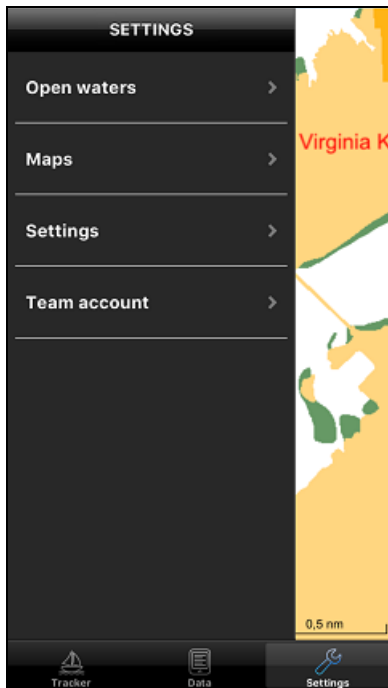

- Press **Data** in toolbar at the bottom to display all recorded data of the current location
- Click on track to display
- See track in map
- Load tracks from other team members to your mobile device by clicking the circled button at bottom left. This synchronizes all available tracking data.

4 Delete track

- **Swipe left** on selected track
- Press **delete**
- Note that after sync the selected track will be deleted on devices of other team members too

5 Settings

- **Open waters** loads individual areas. You must define these areas in the main team software *SailTokyo*
- **Maps** displays and loads available maps.
- **Settings** defines specific app settings (GPS and zoom sensitivity)
- **Team account** provides connection to the cloud and the main team solution *SailTokyo*

6 Team Account

- Ask your *SailTokyo* team solution administrator for your **password** and enter key
- Press **circled arrow button** at bottom left to connect to the team cloud data storage
- Now your app is able to synchronize track data and open waters
